

U.S. Patent Application Serial No. 10/535,393
Reply to Office Action of November 29, 2006

Amendments to the Specification:

Please amend page 8 beginning on line 25 as follows:

Said sensors 100 indicate the selection position to the machine control panel, retractable guides (33) located under the rails, one on either side, in the base plate opening area, being actuated such that one of the ends of the object is located above the retractable guide, actuated in its selection position, whereas the guide of the opposite side remains retracted under the corresponding rail. Said guide actuated in its selection position momentarily holds the object such that the latter falls on its opposite end.
